

Post Rescue Recovery and Return Program

Aangan's *Post Rescue Recovery and Return Program* is designed for use by child protection officials/functionaries who are responsible for the reintegration of child survivors of trafficking and serious harm.

With a view to system strengthening, Aangan's Planning and Coordination Tool is designed to ensure that child survivors are provided a multi disciplinary recovery and return intervention through much-needed stakeholder coordination. Based on gaps identified in the current system, Aangan's tool ensures a streamlined approach so that survivors are supported through the recovery and return journey: *response support, trauma, medical, mental health, care planning and follow up.*

The Planning and Coordination Tool is being used across 10 Child Welfare Committees in 2016 to impact close to 8000 survivors.
